Experience

Full Stack Engineer

Upwork

Nov 2020 - Present (7 months +)

Working on Django based Web application || Contract Expiring On 30th April 2021

Software Developer

Amdocs

Sep 2019 - Nov 2020 (1 year 3 months)

-Developed a Flask-REST based Web application for the global level People Analytics team, Used the SQLAlchemy for the database management, designed the Frontend using CSS, JavaScript, Bootstrap. Deployed this project on a Linux server. Currently this is used by thousands of employees on a daily basis.

-Created a Flask based personalized portfolio web application, for Frontend I used CSS, Bootstrap, JavaScript and wrote a python program to minimize time and data retrieval from the Linux server, deployed this for all 27000+ employees of Amdocs.

-Implemented a Flask based web application to capture Raw data from excel and encrypted the data to transfer it on a secure cloud server, Also created multiple functionalities to generate reports, Create Pie-charts, Graphs etc. It can also generate reports. I was responsible for the security and updates for the server, This application is currently used by multiple Amdocs internal teams.

-Developed a VBA based Outlook plugin to transfer data on a secure cloud server, also implemented a MFA system on this tool for extra secure exchange of files and data.

-Created a Microsoft Word based VBA tool to generate and Automate the Offer Letters and Progression letters of the employees, which reduces the average man hour of 45 minutes to 2 minutes .

-Developed a python-click based CLI tool and integrated it with Outlook to send and receive user sensitive data and store it on Amdocs network and also added a MFA Security on the network.

Education

Vellore Institute of Technology

Bachelor of Technology, Computer Science

2015 - 2019

Skills

Python (Programming Language) • Web Development • Flask • JavaScript • SQL • REST APIs • Linux • Django • React.js • Bootstrap
